Testicular Harvest Packaging Instructions

1. Draw 5ml of blood- spin down in a non-additive tube, and pull off 1 ml of serum- add serum to 2nd non-additive tube. Seal in a bag, and set aside to package with testicles.
2. Preform neuter as you would normally.
3. Place testicles in a ziplock bag or sealed container with just enough sterile saline to keep them from drying in transit (typically 6-10ml). They will be removed from the saline upon arrival, so amount does not need to be exact.
4. Place in an insulated chilled shipping box with ice packs on bottom. Be sure there is at least 1" of folded paper between ice packs and testicles to keep them from freezing.

The goal is to keep testes at refrigerator temperature. (38° F)

5. Fill remaining space above with crumpled paper, to keep contents insulated and in place.
6. Ship FedEx priority overnight to: Sirius Canine Fertility
12444 Nevada City Highway Grass Valley, CA 95945
7. If you have any questions, please do not hesitate to call (530)273-9123

It is crucial that the testicles are NOT frozen! If they freeze the semen will be compromised.

Be sure client has contacted us for appointment. We can receive these Mondays, Tuesdays, Thursdays and Fridays. These will not be processed if received on Wednesday or weekend.
